1. Introduction

This document is produced for ICL Pathway management. It is a summary of the Business Integration Testing Regression Pass of the New Release 2 System. It describes the test environment, test activities performed, test results and the conclusions drawn.

There is a previous BIT Final Pass Report, which describes the results of the previous test cycle.

Ref: VI/REP/162 Version: 1.0 Date: 06/04/99

2. Scope and Objectives

The principle objective of this Regression Cycle was to prove the Audit System was acceptable, which had not been ready for the BIT Final Pass. It also provided a vehicle to:

- prove other areas that had not been proven during the Final Pass activity (such as Invoicing)
- prove that many of the PinICLs raised during BIT Final Pass had been cleared
- run the BPS Acceptance scenarios again

The objectives of the BIT Test phase were:

- to prove data integrity across the various systems making up the NR2 solution
- to prove that these systems integrate, and run together in a live like environment
- to provide an audit trail of the tests performed
- to demonstrate that the system meets the agreed User Acceptance Criteria, particularly for BPS & Audit.

The scope of BIT is wide-ranging:

data is created at its source ...

- running the relevant desktop transactions for EPOSS, APS, CMS/PAS, OBCS and BES
- BPS transactions via the 3 types of Helpdesk
- creating input files at the load area for CAPS & ESNS, and creating input files on the remote FTMS Gateways for De La Rue Card Systems, De La Rue Security Printing, Royal Mail and CFM
- loading the POCL and BA Reference Data in the same way as it will be done live, e.g. using the RDDS & RDMC products
- ... and processing the data via the Maestro Batch Schedules, Harvesters, Bulk Loaders through the TPS, CMS/PAS Extract, and Data Warehouse Systems ... and confirming the results by
- running and checking the Desktop Reports, Receipts, Cash Account,
 PMSR/CBOS Reconciliation reports, the APR Reports, the CCS Invoice, the
 CON system and a sample of performance measures via SLAM, FRMS reports,
 BPS MIS Reports and Business Development Reports
- checking and reconciling the output files to CAPS, ESNS, TIP & HAPS

All of this is done on an Architecture that is as live like as possible, thus testing the use of auto-config. counters, multiple Agents & Correspondence Servers, Help Desks, Data Warehouse, MIS Clients, RDMC Workstation, etc.

Ref: VI/REP/162 Version: 1.0 Date: 06/04/99

3. Management Summary

The Audit system was much improved from the previous cycle, and the success rates documented below should be acceptable. The A06 mapping was also aligned, and the Invoice was successfully reconciled every day of the cycle. (These were the two key issues from the BIT Final Pass Report).

All sessions where BES, EPOS, APS & OBCS were performed together were again successful. (Additional scenarios had been added since the Final Pass, because concerns had been raised).

The BIT Regression Cycle Low Level Test Script comprised 8711 test steps, and a subset of these were mapped to BPS & Audit acceptance criteria.

8168 of these test steps were successfully executed, with actual results matching those expected. This is a success rate of 93.8%.

The 543 test steps that were unsuccessful were approximately, 40% build/configuration issues, 50% product error, and 10% script/data or test execution error. The product errors are all thought to be Low Business Impact.

110 PinICLs were raised as a result of this Regression Cycle.

53 of these were build/configuration issues, closed as duplicates or were no fault in product.

57 of these were product errors of which 25 related to the audit system. Of the remaining 32, 7 of these are on the KPR.

The BIT LLTS test steps are mapped against Acceptance Criteria for all products, but this Regression Cycle was used as an Acceptance vehicle for BPS & Audit only.

2190 test steps were mapped against the BPS Acceptance Scenarios. 2130 of these test steps were successfully executed, which is 97.5%.

13 new PinICLs were raised, and 42 outstanding PinICLs from previous testing were encountered.

2524 test steps were Audit Tests, which included the script lines covering the 34 Audit Acceptance scenarios. 2362 of these test steps were successfully executed, which is 93.6%.

40 new PinICLs were raised, and 7 outstanding PinICLs from previous testing were encountered. (25 of the new PinICLs and 3 of the outstanding PinICLs came about as part of the execution of the 34 audit Acceptance scenarios.)

Ref: VI/REP/162 Version: 1.0 Date: 06/04/99

The BPS Acceptance Managers meetings held on Friday 12/03/99, Tuesday 16/02/99 and Wednesday 17/02/99 concluded that 142 out of the 160 BPS Acceptance Criteria were successfully proven. An additional conclusion was that the majority of the PinICLs that had caused BPS acceptance criteria to fail had now already had fixes made for them.

The Audit Acceptance Managers meeting held on Wednesday 17/03/99, concluded that 11 out of 16 Audit Acceptance Criteria were successfully proven. It was also noted that the majority of problems that had caused Audit acceptance criteria to fail were of a low business impact.

ICL Pathway

Ref: VI/REP/162 Version: 1.0 Date: 06/04/99

4. System Under Test

4.1 Environment

The test environment is known as a 'BIT Rig', the major components of which are as follows:

- Single Sequent Host running under the DYNIX operating system, and with Oracle Database
- 4 Correspondence Servers running under NT 4, and supporting Riposte messaging software
- 4 Agent Servers, running under NT 4
- The 3 varieties of BPS Help Desk running under NT 4, and with Oracle Forms/SQL
- 1 Post Office with 1 Gateway and 1 Non-Gateway counter
- 1 Post Office with 1 Gateway and 2 Non-Gateway counters
- 5 Post Offices with a single Gateway counter
- (all Post Offices running under NT4, and supporting Riposte messaging software)
- 2 non-automated Post Offices were included in the Correspondence Servers
- 6 Local & Remote FTMS Gateway Servers.
- A Data Warehouse running on a Sequent Host, Dynix & Oracle
- 3 MIS Clients for CCS, CON, SLAM, FRMS, Bus.Dev., BPS MIS
- A SLAM Cache Server
- A RDMC Workstation
- 4 Tivoli Servers
- An Audit/Archive Server

4.2 Software

The software release was 9F Baseline, Increment 8.1, with 105 additional fast-tracks. These were all applied before the start of the test cycle, and are identified on the TI Certificate of Build. One fast-track fix applied during the cycle, for an emergency fix that was required to the Audit System.

Ref: VI/REP/162 Version: 1.0 Date: 06/04/99

5. Test Conduct

5.1 Tests Performed

The testing was performed over the period from the 25th February to the 14th March inclusive.

The following test script was run:

Script Number	Description
BIT03	BIT Low Level Test Script

5. 2 Test Execution

The LLTS was printed off on a daily basis, and the test runners initialed each step as it was performed. Each step was marked as tick (successful), cross (unsuccessful) or question mark (query). All unsuccessfuls and queries were subsequently investigated. These were classified as product error, build/configuration issue, script/date/test execution error, or no problem (mis-understanding). PinICLs were raised for all product errors and build/configuration issues, (where there wasn't already an outstanding PinICL).

A Test Diary was kept during the cycle. This can be found in datahome/business integration testing/acceptance pass 2/acceptance pass diary.

There were regular visits by the customer's auditors during the test cycle.

03/03/99: Graham Patterson

04/03/99: Graham Patterson, Damon Lawrence, Lynette Marsden

05/03/99: Geoff Robinson, Graham Patterson, Damon Lawrence, Lynette Marsden

08/03/99: Graham Patterson

10/03/99: Geoff Robinson, Les Buckett, Ruth Stinchombe

11/03/99: Geoff Robinson, Les Buckett, Ruth Stinchombe

16/03/99: Damon Lawerence, Chris Malone

17/03/00: Christine Lowry, Charlie McDowell

Initial feedback indicates that they were all satisfied with the way testing was conducted.

Acceptance Criteria

Meetings were held with the BPS Acceptance Managers to consider the levels of success for the BPS Acceptance Criteria. Their assessments are documented below. The table below is a summary of all BPS Acceptance Criteria.

Totals	Amount
Successful (No incidents recorded against the	160
criteria although observations may have been	
noted)	
Unproven (Due to either application problems	0
stopping a case from performing further	
planned actions, script or data errors certain	
areas of the script could not be executed	
leading to some criteria being unproven)	
Unsuccessful (One or more incidents raised	18
against the criteria)	

The summary of each individual BPS Acceptance area is as follows:

PAS

Totals	Amount
Successful (No incidents recorded against the	34
criteria although observations may have been	
noted)	
Unsuccessful (One or more incidents raised	4
against the criteria)	

ICL Pathway

BIT Regression Test Report NR2

Ref: VI/REP/162 Version: 1.0 Date: 06/04/99

CMS

Totals	Amount
Successful (No incidents recorded against the	40
criteria although observations may have been	
noted)	
Unsuccessful (One or more incidents raised	2
against the criteria)	

DSS Interface

Totals	Amount
Successful (No incidents recorded against the	22
criteria although observations may have been	
noted)	
Unsuccessful (One or more incidents raised	2
against the criteria)	

BES

Totals	Amount
Successful (No incidents recorded against the	64
criteria although observations may have been	
noted)	
Unsuccessful (One or more incidents raised	10
against the criteria)	

These are documented in Appendix A.

ICL Pathway BIT Regression Test Report NR2 Ref: VI/REP/162

Version: 1.0 Date: 06/04/99

6.3 Audit Acceptance Test Statistics

Test Steps

Statistics			tatistics Percentages		
Executed	Successful	Unsuccessful	Deferred	Executed Successful	Unsuccessful
2524	2362	162	0	93.6%	6.4%

Key:

Executed: Number of test conditions run (successful and

unsuccessful)

Successful: Number of test conditions run and were Successful Unsuccessful: Number of test conditions run and were Unsuccessful

Deferred: Number of test conditions not run and will not be run until the BIT

Regression Cycles.

Ref: VI/REP/162 Version: 1.0 Date: 06/04/99

Acceptance Criteria

A meeting needs to be held with the Audit Acceptance Manager to consider the levels of success for the Audit Acceptance Criteria. Their assessments are documented below. The table below is a summary of.

Of the 34 scenarios to be executed 4 (201,206,208,218) contained elements of R2+ functionality. These cases were therefore either totally excluded or partially excluded from the testing performed.

Totals	Amount
Successful (No incidents recorded against the	11
criteria although observations may have been	
noted)	
Unproven (Due to either application problems	0
stopping a case from performing further	
planned actions, script or data errors certain	
areas of the script could not be executed	
leading to some criteria being unproven)	
Unsuccessful (One or more incidents raised	5
against the criteria)	

^{*}Non audit-related application problems did prevent scenario 223 from being executed fully but it was deemed that the omitted elements of the scenario did not effect the overall proving of any of the acceptance criteria.

These are documented in Appendix B.

ICL Pathway

BIT Regression Test Report NR2

Ref: VI/REP/162 Version: 1.0 Date: 06/04/99

7. PinICLs

7.1 Total PinICLs

110 PinICLs were raised as a result of this BIT Regression Cycle.

53 of these were build/configuration issues, closed as duplicates or were no fault in product.

57 of these were product errors of which 25 related to the audit system. Of the remaining 32, 7 of these are on the KPR.

These PinICLs are detailed in Appendix C.

These figures include the BPS & Audit Acceptance PinICLs below.

7.2 BPS Acceptance PinICLs

Based on the execution of 136 BPS Acceptance scenarios, 13 PinICLs were opened for BPS Acceptance as part of the BIT cycle, 42 PinICLs were encountered that were already outstanding problems.

The BPS Acceptance PinICLs are detailed in Appendix D.

7.3 Audit Acceptance PinICLs

Based on the execution of 34 Audit Acceptance scenarios, 25 PinICLs were opened for Audit Acceptance as part of the BIT cycle, 3 PinICLs were encountered that were already outstanding problems.

The Audit Acceptance PinICLs are detailed in Appendix E.

Ref: VI/REP/162 Version: 1.0 Date: 06/04/99

8. Conclusion

8.1 Summary

The test cycle showed that the NR2 System is close to maturity.

- BPS meets the majority of agreed requirements and acceptance criteria.
- Audit meets the majority of the agreed requirements and acceptance criteria.
- The Invoicing system performed well, and was reconciled on a daily basis.
- There are still many bugs within the system, but these appear to be of low business impact.

8.2 Issues

None

8.3 Test Procedure Improvements for future Releases

No further suggestion to those detailed in the BIT Final Pass Reports.

Ref: VI/REP/162 Version: 1.0 Date: 06/04/99

Appendix A

BPS Acceptance Test Results

Section A1 : PAS Acceptance Test Results

The PAS Acceptance Manager has made the following assessments.

Acceptance	Scenario(s)	Result	PinICL(s) / Comments
Reference	Reference		
751/1	71,72,75	Successful	
751/2	75	Successful	
752/1	38,75	Successful	
753/1	83,86	Successful	
754/1	14,16	Successful	
755/1	17,18	Successful	
755/2	70,75	Successful	
		Observation	PC0022647 - Payment showed as available after it was stopped although it could not actually be encashed.
755/3	86	Successful	
756/1	48,79,81,86	Successful	
758/1	15,82	Successful	
758/2	75	Successful	
762/1	75	Successful	
769/1	45,103,104	Unsuccessful	
		Incident (Medium)	PC0022669 - Alt payee local and foreign encashments are being prevented in a certain combination of NPO set-up.
770/4	24	Unsuccessful	
		Incident (Low)	PC0023147 - A foreign encashment performed while the customer's NPO was emergency closed was not rectified overnight to not be a foreign.
770/5	25	Successful	<u> </u>
771/1	79	Successful	
773/1	75	Successful	
		Incident (Low)	PC0022399 - Due to incorrect encashment validation all carded casual agent transactions are being reported as an exception as opposed to the encashment details being returned to CAPS.
781/1	81	Successful	
783/1	75,86	Successful	
791/1	79	Successful	
797/1	29	Successful	
		Observation	PC0022470 - When Establishing contingency payments the find option on the benefit type box did not perform correctly.

Appendix E

PinICLs raised during BIT Regression Pass, whilst executing Audit scenarios

PinICL statuses shown are as at: 06/04/99

PinICL	Description	Scenario(s) PINCL found against.	Incident / Observation recorded.	Accept. Ref	Status
PC22667	CAPS Gatherer is renaming files incorrectly.	202,205,216, 217,220,221, 222	Observation	816/1	Closed – Fix Made and Re- Tested.
PC22889	The TMS Acrhive files are being renamed incorrectly on the archive server.	210,230	Observation	816/1	Fix For Live Trial
PC22898	The archive file for Help Desk calls (PASCAR) contains duplicate data.	209	Observation	699/2	KPR
PC22423	Audit Workstation couldn't write to CD over the network.	210,223,230	N/A	N/A	Closed – No Fault in Product. Outside scope of Acceptance.
PC22543	Files hoarded on separate days although processed by the hoarder at the same time.	217, 230	Observation	816/1	Closed – Fix Made and Re- Tested.
PC22287	The Horizon Help Desk files are being renamed incorrectly by the HHD Gatherer.	233	Observation	816/1	Closed – Fix Made and Re- Tested.
PC22366	OBCS error message was misleading	223	N/A	N/A	Closed - Fix Made and Re- Tested. Outside scope of Audit Acceptance.
PC22270	HHD_AUDIT failed - cannot connect to share.	218, 233	N/A	N/A	Closed - Fix made and re- tested. Outside scope of Acceptance.
PC22286	Certain hoarded files not visible at Workstation.	210, 223,230	Observation	816/1, 942/10	Closed - Fix made and retested.
PC22367	Utility to rebuild message store on the audit server did not function correctly.	210,230	Observation	942/3, 942/8	Closed - Fix Made (Build).
PC22553	No archive file was produced on 12/02/2000 for TMS_RX_PAYMENT_STOPS (PASTRS).	202	Incident (Low)	699/2,942/7	Closed – Consolidated with PC22908.
PC22370	Archived Message store contained out of sequence and duplicated	210,230	Incident (Low)	942/3	Closed - Fix made and re-

Ref: VI/REP/162 Version: 1.0 Date: 06/04/99

	message store entries.				tested.
PC22368	Register entry for utility Agent_Load_Audit_Data not set correctly.	210,230	Observation	816/1, 942/3	Closed - Fix Made (Build).
PC22812	Restore_Audit_Data should process all retrieved message store files it is only processing the first file.	210,230	Incident (Low)	942/11, 942/3	Closed - Fix made and re- tested.
PC22292	TDLR Gatherer is renaming Temporary Token exception Archive files incorrectly.	216,230	Observation	816/1	Fix For Live Trial
PC22293	The TIP Gatherer is renaming archive files incorrectly.	219,230	Observation	816/1	Closed - Fix made and re- tested.
PC22374	The Tivoli Gatherer is renaming files incorrectly.	230	Observation	816/1	Fix For Live Trial
PC23029	Access rights to the BES reports for the standard POCL auditor function are possibly incorrect.	231	Incident (Low)	816/1	Closed – As per specification.
PC22295	The DLR Gatherer is renaming files incorrectly.	205,216,230	Observation	816/1	Fix For Live Trial
PC22356	The HAPS Gatherer is renaming files incorrectly.	230	Observation	816/1	Closed - Fix Made & Re- Tested.
PC22756	OBCS table TMS_TX_LOCAL_STOPS archive file is not being produced.	223	Incident (Low)	942/7, 816/1	Closed - Fix Made & Re- Tested.
PC22294	The RAMIL Gatherer is renaming files incorrectly.	205	Observation	816/1	Closed – Fix Made & Re- Tested.
PC23007	Emergency auditor has access to the training and admin functions when first logged in.	232	N/A	N/A	Closed - No Fault in Product.
PC23031	Standard POCL auditor does not have access to user roles for post office staff. Emergency auditor has access but the method of retrieving this information is long winded.	231	Incident (Low)	816/1	Closed – As per specification.
PC23117	Archived TIP files have incorrect extension on the audit server.	230	Incident (Low)	816/1	KPR
