Subject: RE: PinICL List to a file

Irrelevant

As to the PINICLs themselves, I think that it makes good sense to postpone them from last minute fix releases, but given the amount of money we pay for support, when we have a full regression cycle like (presumably) S10, I would want them ALL fixed, including the D priorities. No exceptions. Chris has the final say of course....

Brian

Brian Orzel PinICL Client Call Summary List 02-Apr-01 14:01
EPOSS-Raised Brian and Escher

Call Reference	Assignee	Summary	Target Relea
PC0062244	C At-Escher	M1G -Simultaneous logon post hardboot and transfer	DTL - unknow
PC0050608	D At-Escher	No help text on User Admin Continue/Cancel buttons	CI4S10

Subject: PinICL List to a file

Brian,

You've obviously cracked the technology to enable a list of PinICLs to be extracted to a file. How is it done? Alternatively, can you generate a list of the current Escher-Dev PinICLs into a file for me please. We need to go through an exercise of checking all outstanding PinICLs (at least the Bs and Cs) so as to factor them into M1R / S10 drops from Escher. My belief is that many of them can be "lived with", in which case they need to be downgraded to D (or at the highest C). The first step is to feed them into a spreadsheet to start the discussions (hence the request). I'll probably be asking you for your input / thoughts on many of them.

Regards

Gareth Jenkins
