

Service Level Target and Liquidated Damages Exclusions

FUJITSU RESTRICTED (COMMERCIAL IN
CONFIDENCE)

Document Title: Service Level Target and Liquidated Damages Exclusions

Document Type: Process – Joint Working Document

Release: Release Independent

Abstract: Joint Working Document to support the Service Level Target & Liquidated Damages Exclusions applicable to the Engineering Service, Branch Network Service and Data Centre Operations Service

Document Status: APPROVED

Author & Dept: Jan Ambrose, Fujitsu Services

Internal Distribution:

External Distribution: Steve Beddoe

UNCONTROLLED IF PRINTED

Approval Authorities:

Name	Role	Signature	Date
Steve Beddoe	Post Office: Senior Service Delivery Manager		
Leighton Machin	Fujitsu Services: Head of End User Services		

Note: See Post Office Account HNG-X Reviewers/Approvers Role Matrix (PGM/DCM/ION/0001) for guidance.

1 Summary

This document defines the exclusions applicable to the calculation of:

- Branch Network Service – Time to Repair Service Level Targets;
- Engineering Service – Time to Repair Service Level Targets;
- Branch Network Service – Branch and Counter Availability Service Level Targets;
- Data Centre Operations Service – Data File Delivery Service Level Targets;
- Branch Network Service – Counter Availability Liquidated Damages, and;
- Data Centre Operations Service – Data File Delivery Liquidated Damages.

2 Extension Criteria - Engineering Service

Where the Time to Repair Service Level Target (SLT) for the Engineering Service, as defined in the CCD entitled: “*Engineering Service: Service Description*” (SVM/SDM/SD/0002), is 93% resolved by 20:00 next working day (17:00 Saturday), this SLT may be extended in the event of half day or full day closing.

2.1 Branch with half day closing

If a branch is open less than or equal to 5 hours on the next working day, the SLT will be the closure time (taken from the next working day) on the following working day.

Examples:

- Call opened Monday, office closed 13:00 Tuesday, SLT will be 13:00 Wednesday
- Call opened Friday, office closed 12:00 Saturday, SLT will be 12:00 Monday

2.2 Branch with full day closing

If a branch is closed for a full day on the next working day, the SLT will be suspended until 20:00 on the following working day.

Examples:

- Call opened Monday, office closed Tuesday, SLT will be 20:00 Wednesday
- Call opened Thursday, office closed Friday to Wednesday, SLT will be 20:00 on the following Thursday

3 Exclusion Criteria - Engineering Service and Branch Network Service

Engineering Service and Branch Network Service incidents may be excluded partially or totally from SLTs and Liquidated Damages as defined below:

- Partial exclusion allows the call to be suspended for part of the call;
- Total exclusion allows the call to be suspended for the duration of the call i.e. from its open time to its clear time.

Incidents may be excluded in accordance with the criteria set out in Table 1:

Service Level Target and Liquidated Damages Exclusions

FUJITSU RESTRICTED (COMMERCIAL IN
CONFIDENCE)

Table 1

Reason for exclusion	Partial Exclusion	Total exclusion
Access Times	*	
Tivoli indicates Branch/Counter operational	*	
Functionality not impacted by fault	*	
Call reclassification (ND to HD)	*	
Incident passed out of Fujitsu domain	*	
Unable to contact Branch to progress resolution	*	
Clear time requires adjustment	*	
Delay in resolution – Not Fujitsu default	*	
Fault due to enforced closure, third party or user error/damage/negligence	*	
Complex network fault	*	
Remote site network fault	*	
Branch in OBC status		*
Agreed pilot site		*
Engineer refused access to Branch		*
Call cancelled by Branch		*
Duplicate call raised by Branch		*
No fault found by engineer		*
Engineer performed off-site branch router provision		*
Monitor fault – Able to trade at position		*
Keyboard fault – Able to trade at position		*
Base unit fault – Able to trade at position		*
Training site call		*
Internally raised call		*
Indeterminate resolution		*
Service disabled by agreement with POL		*
Network wide failure		*

Further details of the exclusion criteria relating to Engineering Service and Branch Network Service incidents are provided in Section 5.

4 Exclusion Criteria - Data File Delivery

Data File Delivery Transactions may be excluded from SLTs and Liquidated Damages in accordance with the criteria set out in Table 2:

Table 2

Reason for exclusion
Access times
Branch in OBC status
Fault due to enforced closure, third party or user error/damage/negligence
Engineer unable to access Branch and/or kit
Let agreed by POL/Fujitsu

Further details of the exclusion criteria relating to Data File Delivery transactions are provided in Section 6.

5 Exclusion Details - Engineering Service and Branch Network Service

Further details of the reasons for exclusion listed in Table 1 are provided below. Unless otherwise stated, the exclusions will apply to all faults and relate to both Service Level Targets and Liquidated Damages.

5.1 Access times

Calls will be suspended for any time outside the access hours as provided by the branch, which may be greater or more restrictive than the opening hours. In the case of portables the access times are when the engineer can have access to the portable at the location at which the fault can be resolved. Calls may also be suspended if the branch requests a call back or an engineer visit at a specific time. The call is suspended from the time when the branch gave the instruction until the time the branch requested the call/visit.

5.2 Tivoli indicates Branch/Counter operational

Calls will be suspended when the event management system indicates that the branch/counter is operational. This will allow for accurate suspension on intermittent communications faults and also when the engineer is delayed in returning the call closure notification. This exclusion will apply to Branch Network and Hardware branch router incidents only.

5.3 Functionality not impacted by fault

Where the fault does not have a consistent effect on the operation of the branch e.g. reboot required each morning but thereafter service is fully operational for the remainder of the day, whilst awaiting engineer visit. This is not applicable to portables at the storage location, see 5.1.

5.4 Call reclassification (ND to HD)

If during the investigation of a network fault (ND) it is identified that the fault is with the base unit or branch router, the call will be recoded to HD. The call will be suspended from the open time until the call is passed to engineering, which may include the time the call is with BT. This exclusion will apply to Hardware base unit and branch router incidents only, which have been recoded from ND to HD.

5.5 Incident passed out of Fujitsu domain

Where the incident has been passed out of the Fujitsu domain e.g. where the branch details are passed to BT or referral to POL agreed. The call is suspended from the time the call was passed out of the Fujitsu domain until the time the call is passed back to Fujitsu Services.

5.6 Unable to contact Branch to progress resolution

Where the Service Desk or Third Line Support have been unable to contact the branch to arrange an engineer visit or provide remote assistance. It should be evident within the call that reasonable endeavours were used to contact the branch. The call is suspended after reasonable endeavours to contact the branch were made until the time that contact with the branch is established.

5.7 Clear time requires adjustment

Where it is evident that the service became operational prior to the clear time specified in the call. The call is suspended from the time that the service became operational until the clear time.

5.8 Delay in resolution – Not Fujitsu default

Where an engineer has been delayed in visiting branch(es) in a geographical area due to reasons completely out of the control of Fujitsu Services. The call is suspended from the time that access is prevented until the time it becomes available again. Details of the delay in resolution must be recorded and exclusion agreed with Post Office Service Delivery.

5.9 Fault due to enforced closure, third party or user error/damage/negligence

Where a delay is incurred in the service becoming operational due to circumstances of enforced closure, user or third party error, damage or negligence. The call will be suspended from the time that the resumption of service is prevented until the time it becomes possible to resume service again.

5.10 Complex network fault

Where an engineer has visited the branch and was on site for more than six hours in order to identify that the network fault lies outside the Fujitsu domain, the call will be suspended from the point the engineer arrives on site until the time the engineer visit is completed.

5.11 Remote site network fault

Where the call has been logged by a remote site and requires an engineer visit for a network fault, the call will be suspended from the point the incident is received by engineering until the time the engineer visit is completed. This exclusion will apply to Branch Network incidents only.

5.12 Branch in OBC status

Where the fault relates to an OBC Branch Change which is in the course of completion.

5.13 Agreed pilot site

Where the fault relates to a pilot site which is excluded from SLTs and Liquidated Damages as agreed by POL.

5.14 Engineer refused access to Branch

Where an engineer has visited the branch within the specified access times but has been refused access to the branch. This exclusion will apply to all engineer visits e.g. Fujitsu engineer, BT engineer.

5.15 Call cancelled by Branch

Where the branch has taken action to resolve the fault, or the fault has resolved itself, and the call has subsequently been cancelled.

5.16 Duplicate call raised by Branch

Where an earlier call has been logged by the branch relating to the same incident and which has been progressed to resolve the fault.

5.17 No fault found by engineer

Where an engineer has visited the branch but has taken no action due to the service being fully operational. This exclusion will apply to Hardware Incidents only.

5.18 Engineer performed off-site branch router provision

Where it is evident that an engineer performed a branch router provision at another branch (usually a crown office). This request is usually logged as three separate incidents (all to be excluded) – one to collect the kit, one to provision the branch router and one to return the branch router and set up BNR. This work must be authorised by the Branch Network Service team.

5.19 Monitor fault – Able to trade at position

Where a monitor fault has not prevented the position from being able to trade e.g. touchscreen fault, keyboard used as workaround. This exclusion will apply to Branch and Counter Availability Service Level Targets and Liquidated Damages only as specified in 'Branch Network: Service Description' [Ref. SVM/SDM/SD/0011].

5.20 Keyboard fault – Able to trade at position

Where a keyboard fault has not prevented the position from being able to trade e.g. card reader fault, keyboard used as workaround. This exclusion will apply to Branch and Counter Availability Service Level Targets and Liquidated Damages only as specified in 'Branch Network: Service Description' [Ref. SVM/SDM/SD/0011].

5.21 Base unit fault – Able to trade at position

Where a base unit fault has not prevented the position from being able to trade e.g. spare cable request, scales issue. This exclusion will apply to Branch and Counter Availability Service Level Targets and Liquidated Damages only as specified in 'Branch Network: Service Description' [Ref. SVM/SDM/SD/0011].

5.22 Training site call

Where the call has been logged by a POL training site.

5.23 Internally raised call

Where the call has been incorrectly logged against a live branch when it has been internally raised by Fujitsu Services.

5.24 Indeterminate resolution

Where a fault has been resolved but both its cause and resolution are unclear. For example, where a fault is investigated by a number of areas, say, Service Desk, Third Line Support, BT and POL, who all undertake actions to try and resolve the fault but, although the fault is resolved, its cause and the resolving action are unclear. It should be evident within the call that reasonable endeavours were used to diagnose the cause of the fault and to resolve it and exclusion must be agreed with Post Office Service Delivery.

5.25 Service disabled by agreement with POL

Where the service has been disabled by agreement with POL e.g. for protection against a computer virus.

5.26 Network wide failure

Where the fault results from failure of the HNG-X Central Infrastructure and/or the Central Telecom Infrastructure which results in a loss of the availability of one or more branches and counter positions. Such faults will be included in the Network Wide Failure unavailability figures and therefore individual calls in respect of this failure may be excluded.

6 Exclusion Details - Data File Delivery

Further details of the reasons for exclusion listed in Table 2 are provided below. The exclusions relate to both SLTs and Liquidated Damages.

6.1 Access times

Calls will be suspended for any time outside the access hours as provided by the branch, which may be greater or more restrictive than the opening hours. In the case of portables the access times are when the engineer can have access to the portable at the location at which the fault can be resolved. Calls may also be suspended if the branch requests a call back or an engineer visit at a specific time. The call is suspended from the time when the branch gave the instruction until the time the branch requested the call/visit.

6.2 Branch in OBC status

See Section 5.12

6.3 Fault due to enforced closure, third party or user error/damage/negligence

See Section 5.9

6.4 Engineer unable to access Branch and/or kit

Where the engineer has been unable to gain access to the branch/kit e.g. refused by Postmaster or for Health and Safety reasons.

6.5 Let agreed by POL/Fujitsu

Where a let for a branch has been jointly agreed by POL and Fujitsu Services.
